

Product: **Indra**

Protected

Key Benefits:

- Protects plants from heat, drought, cold, salinity and UV
- Promotes antioxidants
- Improves flavour and colour
- Improved maturity in high UV growing conditions

Product: **Indra**

Technical Data:

Indra is a product that improves growth and quality of soft fruit by helping the crop cope with stress caused by heat, cold, salinity, drought, and high UV light. Stress causes crops to produce toxins (ROS) that damage cells, and reduce quality. Indra promotes the plants own antioxidant production, and supplies the nutrients needed to make their manufacture possible.

Why is Stress Management Important?

Stressed crops grow more slowly and lose yield. Stress reduces quality and shelf life of crops. Disease and pest attack increases when plants are stressed. All types of stress decrease quality and yield.

Application rate: 1 L/ha at 14-day intervals during periods of stress.

EC FERTILISER E.2.1:

1.95% Nitrogen (N) 0.92% Amine, 0.92% Ureic

Copper (Cu) 0.5%

Manganese (Mn) 1.5%

Iron (Fe) 2%

Zinc (Zn) 2%

Magnesium Oxide (MgO) 0.5% w/w
