

Product: **Sulis**

Key Benefits:

- Better colour
- Improved brix
- Higher marketable yield

Top Fruit

Product: **Sulis**

Technical Data:

Sulis is a product that increases the speed a crop matures, it works by stimulating the processes that produce colour and brix whilst supplying the nutrients needed to make their manufacture possible.

Application rate: 1-2 L/ha during ripening, repeat at 14 day intervals if required.

EC FERTILISER E.1.6d:

Water Soluble Molybdenum (Mo) 3%

Boron (B) 0.5% w/w

Why is Maturity Important?

Colour and brix are important quality parameters that affect the grading of crops. When crops lack the nutrients needed to fuel the process of maturity, then harvest is delayed. Sulis allows crops to mature more rapidly, without affecting quality and shelf life. Sulis helps farmers increase marketable yield, and manage when crops are ready for market.
